

Sacramento River Watershed Program Watershed Management Technical Assistance

Workshop Series May, 2012 — August, 2013

Held in seven regions across California

Applications Now Open!

The Sacramento River Watershed Program seeks applications to attend the Workshops. Applications for the first Redding Workshop are due by APRIL 16, 2012. Other regional applications are due 45 days before the first scheduled Workshop in each region.

Fee per Workshop - \$35

Space is limited—no more than 40 participants will be selected for each workshop.

Desired Candidates:

Participants will be selected from the applications to provide a high degree of diversity in each Workshop. Some of those we seek include:

- County and City elected officials
- State and Federal agencies
- environmental group members
- agricultural representatives
- educators
- business interests
- legislative staff
- water purveyors and managers
- recreation industry representatives
- media representatives
- developers and contractors
- planners and regulators

and others with an interest in local watershed management, and who may wish to improve their skills in community-based, locally-led environmental management.

Workshop registrants will be selected from among the applications to ensure diversity among the groups. Prior experience in watershed management is not a pre-requisite for consideration. The selected class will represent a broad range of backgrounds, management perspectives, geographic locations, occupations, experience and expertise. The applicant's desire and potential to contribute to natural resource management in their region will be an important consideration.

What the Workshops will include:

Presenters in the series will include major policy makers, agency managers and directors, non-government entities, and nationally known experts in many topics. The topics are varied, and presented through lectures, interactive exercises and hands-on learning. The format of the workshops typically allows for interaction with the faculty, as well as continued interaction with other attendees during and outside of classroom activities.

A sampling of topics:

- Conflict management and developing collaborative partnerships
- Organizational development and support strategies
- Watershed science and restoration techniques
- Performance and status monitoring
- Program management and implementation skills
- Monitoring program design and implementation
- Strategic planning and adaptive management
